WHAT IS LAMINATE FLOORING?

- CFA 8mm and 12mm iLaminate flooring utilises high-density fibre (HDF) core board and the top layer has a protective scratch resistant layer, giving your laminate floors the highest level of protection against everyday living. iLaminate floors are easy for the DIY handyman and fast laying for installers, saving you time and money. The latest colourfast technology also gives the flooring protection from the harsh Australian sun.
- CFA Vaucluse Rigid Plank is the latest in new generation flooring technology. It uses the latest in colourfast technology and deep embossing to give you a natural timber look. It also uses the latest acoustic backing for excellent sound absorption.

LAMINATE FLOOR CARE

Use a dust mop, soft bristle broom or vacuum cleaner with suction only (no beater bar or with the beater bar disengaged) to remove dust, dirt and loose particles on a regular basis. For slightly damp cleaning, spray a solution of 1 part vinegar and 12 parts water into a cotton microfiber mop. Avoid wet mop cleaning with water or liquid cleaners.

Use protective window coverings to block fade causing UV rays and excessive heat from direct sunlight, and rearrange rugs and furniture periodically to help your floor age evenly.

- Wipe up spills and spots immediately
- Invest in high-quality floor mats and protective pads under heavy furniture for an extra layer of protection on your laminate floors. Place floor mats at entrances and exits - they collect and trap corrosive substances that can be tracked in, like dirt, sand, oil, grit asphalt, or even driveway sealer. Placing mats in high traffic areas - in front of vanities, kitchen sinks, and stoves - is an effective way to reduce wear.

WHAT TO AVOID

- Wax, polish, oils, soaps, detergents, shine enhancers and varnish shouldn't be used on laminate.
- Avoid cleaning machines like spray mops, steam cleaners or mops, or power cleaners.
- Always avoid mopping with water and dry up any spills immediately.
